EDUCATION

California State University, Fullerton

Fullerton, CA

B.S. in Computer Science

May 2026

- Dean's Honor List: Fall 2025, Spring 2026
- Relevant Coursework: Data Structures, Algorithms Engineering, Operating Concepts, System Design, Software Engineering, Artificial Intelligence, Machine Learning

EXPERIENCE

Manager

Aug. 2026 – Present

79 Nails and Hair

Fullerton, CA

- Owns full daily operations for a high-traffic salon end-to-end – staff rotation, cash flow, customer complaints, staff supervision, and healthcare-grade cleanliness standards – trusted to operate independently, reporting to the owner only 2–3x/week since promotion from Assistant Manager

Assistant Manager

2023 – Aug. 2026

79 Nails and Hair

Fullerton, CA

- Managed daily operations, staff scheduling, and customer service for 3 years, earning promotion to Manager through consistently reliable execution under pressure

PROJECTS

Turn Rotation – Concurrency-Safe Fairness Engine | *Next.js, PostgreSQL, Amplify*

2026

- Engineered a concurrency-safe queue engine using atomic PostgreSQL functions and optimistic concurrency control, eliminating race conditions a naive app-level lock would miss under concurrent writes
- Manually validated ~350 real assignments, traced a 2% error rate to two logic bugs exposed only under real concurrent load, reproduced each with a failing test, and shipped fixes same-day
- Ran 53 automated tests (unit + real-Postgres integration) in CI via Docker on every push, verifying correctness under concurrent write paths

79 Nails & Hair Booking Platform | *Next.js, PostgreSQL, Docker*

2026

- Guaranteed no-double-booking under concurrent requests at the database level via a Postgres exclusion constraint on a computed time-range – not an app-level check a race condition could slip past
- Hardened the platform with Row Level Security on every table and CI (lint, typecheck, test, build) gating every deploy; 26 automated tests and a 100/100 Lighthouse accessibility score

DataChat – Natural Language to SQL Engine | *Python, SQLite, GPT-4o-mini*

2026

- Built a pipeline translating natural language into SQL, executing it, and explaining results – grounding output in real query execution instead of model guesses
- Iterated query-generation logic across 3 versions against a labeled evaluation suite, improving accuracy from 66.7% to 100% on 12 test cases

TECHNICAL SKILLS

Languages: C++, Python, JavaScript/TypeScript, SQL, C#

CS Fundamentals: Data Structures, Algorithms, Concurrency, Operating Systems, System Design

Databases: PostgreSQL (Supabase, Row Level Security), MySQL, SQLite

Developer Tools: Git, GitHub Actions (CI/CD), Docker, Vitest, Vercel, AWS Amplify, VS Code
