EDUCATION

California State University, Fullerton

Fullerton, CA

B.S. in Computer Science

May 2026

- Dean's Honor List: Fall 2025, Spring 2026
- Relevant Coursework: Data Structures, Algorithms Engineering, Software Engineering, Machine Learning, Applied AI, Artificial Intelligence, System Design, Operating Concepts

EXPERIENCE

Manager

Aug. 2026 – Present

79 Nails and Hair

Fullerton, CA

- Owns full daily operations for a high-traffic salon end-to-end – staff rotation, cash flow, customer complaints, staff supervision, and healthcare-grade cleanliness standards – trusted to operate independently, reporting to the owner only 2–3x/week since promotion from Assistant Manager

Assistant Manager

2023 – Aug. 2026

79 Nails and Hair

Fullerton, CA

- Managed daily operations, staff scheduling, and customer service for 3 years, earning promotion to Manager through consistently reliable execution under pressure

PROJECTS

DataChat – Natural Language CSV Queries | *Python, OpenAI GPT-4o-mini, SQLite, pandas*

2026

- Built a two-LLM-call, prompt-based pipeline that converts natural language questions into SQL, executes them, and explains results in plain English
- Developed and evaluated prompts across 3 iterations against a labeled evaluation framework, improving accuracy from 66.7% to 100% on 12 test cases
- Added a self-correction feedback loop that feeds SQL execution errors back into the model to automatically resolve failed queries

79 Nails & Hair Booking Platform | *Next.js, PostgreSQL, Claude API, Docker*

2026

- Shipped an LLM-powered natural-language search where every AI-returned result is re-validated against the live database before reaching a user, directly improving reliability by eliminating hallucinated results
- Built a real-time booking platform for a real business, guaranteeing no double-booking at the database level via a Postgres exclusion constraint, not an app-level check a race condition could slip past
- Wrote well-tested code with CI (lint, typecheck, test, build) gating every deploy; 26 automated tests and a 100/100 Lighthouse score for accessibility, best practices, and SEO

Turn Rotation – Staff Fairness Engine | *PostgreSQL, AWS Amplify, Textract*

2026

- Engineered a concurrency-safe rotation engine using atomic PostgreSQL functions and optimistic concurrency
- Resolved a production issue through root cause analysis: manually validated ~350 real assignments, traced a 2% error rate to two real bugs, reproduced each with a failing test, and shipped fixes the same day
- Set up CI running PostgreSQL in Docker for 53 automated tests on every push

TECHNICAL SKILLS

Languages: Python, JavaScript/TypeScript, SQL, C++, C#

Frameworks: Next.js, React, FastAPI, Flask, Strapi, Anthropic Claude API, OpenAI GPT-4o-mini

Databases: PostgreSQL (Supabase, Row Level Security), MySQL, SQL Server

Developer Tools: Git, GitHub Actions (CI/CD), Docker, Vitest, Sentry, Zod, Vercel, VS Code, AWS Amplify
