EDUCATION

California State University, Fullerton

Fullerton, CA

B.S. in Computer Science

May 2026

- Dean's Honor List: Fall 2025, Spring 2026
- Relevant Coursework: Data Structures, Algorithms Engineering, Software Engineering, Machine Learning, Applied AI, Artificial Intelligence, System Design, Operating Concepts

EXPERIENCE

Manager

Aug. 2026 – Present

79 Nails and Hair

Fullerton, CA

- Owns full daily operations for a high-traffic salon end-to-end – staff rotation, cash flow, customer complaints, staff supervision, and healthcare-grade cleanliness standards – trusted to operate independently, reporting to the owner only 2–3x/week since promotion from Assistant Manager

Assistant Manager

2023 – Aug. 2026

79 Nails and Hair

Fullerton, CA

- Managed daily operations, staff scheduling, and customer service for 3 years, earning promotion to Manager through consistently reliable execution under pressure

PROJECTS

Turn Rotation – Staff Fairness Engine | *PostgreSQL, Playwright, Docker*

2026

- Wrote 53 automated tests (45 unit, 3 real-Postgres integration, 5 Playwright/axe-core) and verified suite effectiveness with mutation testing; ran the full suite in CI against Postgres-in-Docker on every push
- Manually audited ~350 real rotation assignments against documented fairness rules, found a 2% error rate, and analyzed the failures to isolate two distinct root causes
- Reproduced each defect with a failing regression test before fixing it, then shipped both corrective fixes to production the same day

79 Nails & Hair Booking Platform | *Next.js, PostgreSQL, Claude API*

2026

- Gated every deploy on a CI pipeline (lint, typecheck, 26 automated tests, build) and enforced no-double-booking as a database-level Postgres constraint, not an app-level check a race condition could slip past
- Built a systematic re-validation layer that checks every AI-generated search result against the live catalog before it reaches a user, so a hallucinated result can never surface in production
- Found and fixed a stored-HTML-injection bug in outbound emails through testing; hardened with Row Level Security on every table and Sentry error monitoring

DataChat – Natural Language CSV Queries | *Python, GPT-4o-mini, SQLite*

2026

- Built a labeled evaluation suite of 12 test cases and used it to systematically measure and improve text-to-SQL accuracy from 66.7% to 100% across 3 iterations of the prompt design
- Added a self-correction loop that feeds failed-query error output back into the model, automatically recommending and applying a corrective fix without human intervention

TECHNICAL SKILLS

Languages: Python, JavaScript/TypeScript, SQL, C++, C#

Testing & QA: Vitest, Playwright, axe-core, Jest, Mutation Testing, Postgres Integration Testing, Manual Regression Auditing

Frameworks: Next.js, React, FastAPI, Flask, Strapi, Anthropic Claude API, OpenAI GPT-4o-mini

Databases: PostgreSQL (Supabase, Row Level Security), MySQL, SQL Server

Developer Tools: Git, GitHub Actions (CI/CD), Docker, Sentry, Zod, Vercel, VS Code, AWS Amplify
