Finn Nguyen

Garden Grove, CA | (657) 384-3101 | Finnnguyen93@gmail.com | linkedin.com/in/finn-nguyen | github.com/finnnguyen | finn-portfolio-phi.vercel.app

Education

California State University, Fullerton — Fullerton, CA
B.S. in Computer Science — *May 2026*

- Dean's Honor List: Fall 2025, Spring 2026
- Relevant Coursework: Data Structures, Algorithms Engineering, Software Engineering, System Design, Operating Concepts

Projects

79 Nails & Hair Booking Platform | *Next.js, PostgreSQL (Supabase), Claude API* — 2026
79nailsandhair.vercel.app

- Built and launched online booking for the 7-stylist, 41-service salon I manage; the database itself rejects overlapping appointments, so a stylist can never be double-booked
- Added an AI search (Claude API) where customers describe what they want in plain English; every AI suggestion is checked against the real service list, so a made-up service is never shown
- Found and fixed a security bug in customer emails (HTML injection) before release; locked down customer data with database access rules (Row Level Security)
- Every one of 18+ production deploys had to pass automated checks and 26 tests first (GitHub Actions CI)

Turn Rotation – Concurrency-Safe Fairness Engine | *Next.js, PostgreSQL, AWS Amplify* — 2026
main.d1fp0wl4mlqx0q.amplifyapp.com

- Built an app that decides which stylist takes the next walk-in customer, so turns stay fair; used it on the salon floor for a week (∼50 assignments/day)
- Hand-checked all ∼350 assignments against the fairness rules: 98% were correct; traced the rest to two bugs, reproduced each with a failing test, and shipped fixes the same day
- Kept the queue correct when two managers act at once by making each update one atomic database step
- 53 automated tests run on every push; uploaded price lists become draft menu items (Amazon Textract), and nothing goes live until a manager approves

DataChat – Natural Language CSV Queries | *Python, Flask, GPT-4o-mini, SQLite* — 2026
github.com/finnnguyen/datachat

- Built a web app where you upload any CSV and ask questions in plain English; GPT-4o-mini writes the SQL, the app runs it, and a second AI call explains the real result
- Raised accuracy on my 12-question test set from 8/12 to 12/12 by adding example questions, checking the AI's output, and retrying with the error message when a query fails
- Blocked prompt injection through CSV column names; every query runs on a read-only connection

Experience

Manager — Aug. 2026 – Present
79 Nails and Hair – promoted from Assistant Manager (2023 – Aug. 2026) — *Fullerton, CA*

- Run daily operations for a 7-person salon (staff rotation, scheduling, cash reconciliation) with the owner on-site only 2–3 days/week
- Identified real scheduling and turn-fairness problems on the floor and built the booking platform and rotation engine described under Projects

Technical Skills

Languages: Python, JavaScript/TypeScript, SQL
Frameworks & AI: Next.js, Flask, Anthropic Claude API, OpenAI GPT-4o-mini
Databases: PostgreSQL (Supabase, Row Level Security), SQLite
Developer Tools: Git, GitHub Actions (CI/CD), Docker, Vitest, Sentry, Vercel, AWS Amplify, Linux/Unix
