SOFTWARE ENGINEER

Full-stack-focused Computer Science graduate who owns problems end-to-end, UI through a bit of backend, and ships bulletproof, production-hardened systems, not demos. Uses AI as leverage without giving up correctness. Backed by 2+ years of real leadership experience as a Manager independently running a business's daily operations.

TECHNICAL SKILLS

Languages: Python, JavaScript/TypeScript, SQL, C++, C#

Frameworks: Next.js, React, FastAPI, Flask, Strapi, Anthropic Claude API, OpenAI GPT-4o-mini

Databases: PostgreSQL (Supabase, Row Level Security), MySQL, SQL Server

Tools: Git, GitHub Actions (CI/CD), Docker, Vitest, Sentry, Zod, Vercel, VS Code, AWS Amplify

Process: Agile Unified Process (Inception, Elaboration, Construction, Transition) — 6-person team project, CPSC 466 Software Process

EXPERIENCE

Manager — 79 Nails and Hair | Aug 2026 – Present

- Owns full daily operations for a high-traffic salon end-to-end — staff rotation, cash flow, customer complaints, staff supervision, and healthcare-grade cleanliness standards — trusted to operate independently, reporting to the owner only 2–3x/week since promotion from Assistant Manager.

Assistant Manager — 79 Nails and Hair | 2023 – Aug 2026

- Managed daily operations, staff scheduling, and customer service for 3 years, earning promotion to Manager through consistently reliable execution under pressure.

PROJECTS

79 Nails & Hair — Production Booking Platform — Personal Project | Next.js, React, PostgreSQL (Supabase, RLS), Anthropic Claude API | 2026

- Owned a real product surface end-to-end, UI through backend, shipping a live booking platform used daily by real customers and staff.
- Used Claude as leverage for natural-language search without giving up correctness — every AI-returned result is re-validated against the live database before reaching a user, so a hallucinated result can never ship.
- Found and fixed a stored-HTML-injection bug in production, then hardened the platform with Row Level Security on every table and CI gating every deploy.

Turn Rotation — Salon Staff Rotation & Fairness Engine — Personal Project | PostgreSQL, AWS Amplify, GitHub Actions | 2026

- Engineered a concurrency-safe rotation engine using atomic PostgreSQL functions, then raised the bar on correctness after shipping: manually validated ~350 real assignments against the fairness rules.
- Traced a 2% error rate to two real bugs, reproduced each with a failing test, fixed both, and shipped the fix to production the same day.
- Set up CI running PostgreSQL in Docker for 53 automated tests on every push, keeping the system correct as it kept changing.

ADDITIONAL TECHNICAL PROJECTS

- DataChat — Natural Language CSV Queries (Python, OpenAI GPT-4o-mini) — two-LLM-call pipeline with a self-correction retry loop; iterated prompts from 66.7% to 100% accuracy on a labeled evaluation suite.
- Supervised Learning — House Price & Disease Prediction (scikit-learn) — regression/classification models, improved accuracy 78% → 85% through tuning.
- Spam Tool Kit (scikit-learn, Flask) — 4-module app; 99.28% SMS and 97.20% email spam-detection accuracy.

EDUCATION

B.S. Computer Science — California State University, Fullerton | May 2026

- Dean's Honor List: Fall 2025, Spring 2026
- Relevant Coursework: Data Structures, Algorithms Engineering, Software Engineering, Machine Learning, Applied AI, Artificial Intelligence, System Design, Operating Concepts
